Course Details

Credit Points: 6

Summary of the Course

This course illustrates the nature of and need for multi- or trans-disciplinary approaches for addressing environmental problems of national and/or global importance; group work or seminar presentations will draw on current or recent key environmental issues and will be supported by brief lectures. Some of the topics you will cover are: environmental governance, international environmental regimes/conventions, framing and defining environmental issues, public participation and stakeholder engagement, decision making, integrated and forward-looking analysis/planning for sustainable development schemes etc., risk and knowledge/complex systems and adaptive management, sustainable natural resource management, environmental impacts of production and consumption.

Course Learning Outcomes

1. Demonstrate an advanced understanding of the multidisciplinary body of knowledge needed for environmental management and apply disciplinary and applied policies and practices to new or complex challenges.
2. Develop analytical skills, and advanced critical an

to new or complex challenges.
