

Errata: Solution Sheet 4, May 25, 2012

Answers

- 1. f(4) = 6. Generally, f(n) = (n-1)!
- 2. (22) * (35) = 770 is the only combination where both numbers are over 18.
- 3. (a) 50 + 20 10 = 60. This is the number of numbers *with* a factor in common with 100. So the answer should be 100 60 = 40.
 - (b) 25 * 102 + 10 * 105 5 * 110 = 3050. This is the sum of numbers *with* a factor in common with 100. So the answer should be $1 + 2 + \cdots + 100 3050 = 2000$
- 4. X = 0;
