

MATHEMATICS ENRICHMENT CLUB.
Solution Sheet 1, May 5, 2015

1. Let $x = 0.284284284 \dots$; then

$$\begin{aligned} 1000x &= 284.284284284 \dots \\ &= 284 + x; \end{aligned}$$

thus $x = 284/999$.

2. We can write the infinite sum as

$$1 + \frac{1}{2} + \frac{1}{6} + \frac{1}{12} + \dots + \frac{1}{10100} = 1 + \sum_{n=2}^{\infty} \frac{1}{n(n-1)}$$

Using the given formula,

$$\begin{aligned} 1 + \sum_{n=2}^{\infty} \frac{1}{n(n-1)} &= 1 + \sum_{n=2}^{\infty} \left(\frac{1}{n-1} - \frac{1}{n} \right) \\ &= 1 + \left(\frac{1}{1} - \frac{1}{2} + \frac{1}{2} - \frac{1}{3} + \frac{1}{3} - \frac{1}{4} + \dots \right) \\ &= 1 + \frac{1}{1} \\ &= 2 \end{aligned}$$

3. Let S be the number of members that plays Soccer.

(a) If we add the number of members that plays either Basketball, Cricket or Soccer, we would end up with a number that is greater than the total number of members in the sports club, because we have double counted the number of members that plays two sports *only*, and triple counted the number of members that plays *all* three.

So to balance this out we need to subtract the double/triple counts: We know that 10 plays *all* three sports, so these member we triple counted. There is 60 members that plays two or more sports, and 10 that plays all three, therefore there is $60 - 10 = 50$ members that plays two sports *only*.

The balanced equation is then

$$163 = S + 100 + 73 - 50 - 2(10);$$

which gives $S = 60$.

- (b) The number of members that plays both Basketball and Cricket but not Soccer is $25 - 10 = 15$, therefore $60 - 15 = 45$ members plays Soccer and Basketball or Soccer and Cricket or all three sports. Since $S = 60$, $60 - 45 = 15$ of these members plays Soccer only.
4. (a) Here $|QC|$ means the length of QC . By construction, the length of AP is b ; that is $|AP| = b$. Since the point Q is the intersection of the tangent PQ and CQ of the same circle arc PC , $\angle PQO = \angle CQO$ (you may want to prove this as an exercise). So the problem is reduced to finding $\angle PQO$. Note that $\angle BPQ$
